

CONCEPT PAPER

Senior Living Management System: An Integrated Platform for Excellence in Care and Operations

The Senior Living Management System is a comprehensive, integrated platform designed to meet the unique and complex needs of assisted living communities. It unifies three core domains into a single, seamless ecosystem:

1. **Care System:** Focused on resident health and well-being.
 2. **Hospitality & Property Management System:** Focused on the resident and family experience, and community operations.
 3. **Administrative & Billing System:** Focused on financial performance and operational efficiency.
-

1. Care System

The Care System is the clinical hub of the platform, empowering staff to deliver exceptional, person-centered care through streamlined workflows and accurate, real-time data.

a.) Electronic Health Records (EHR) and Care Plans

Easier Charting, Better Care, Happier Residents

This module replaces paper-based processes with a digital, real-time view of each resident's health journey. It enables care teams to complete assessments, automatically build dynamic care plans, generate task lists, and track incidents. The result is improved clinical outcomes, increased resident and family satisfaction, and longer, more successful stays.

- **Electronic Health Record (EHR):** A comprehensive, digital record of a resident's medical history, including diagnoses, medications, allergies, lab results, and physician notes. Designed for secure sharing across the care team, the EHR improves care coordination, reduces errors, and streamlines clinical workflows.
- **Care Plans:** Tailored, documented roadmaps detailing a resident's health needs, goals, and the specific actions required from the care team. These plans foster collaboration, ensure consistency of care, and empower residents and their families to be active participants in the care process.

b.) Medication Management (eMAR)

Reduced Med Errors, Improved Oversight, Happier Residents

The Electronic Medication Administration Record (eMAR) module revolutionizes medication management, replacing paper charts with a secure, intuitive digital system accessible via tablet or mobile device. By improving med-passing workflows and integrating with pharmacies, it ensures accuracy, enhances resident safety, and simplifies the entire medication process.

Key features include:

- **Error Prevention:** Clear presentation of medication details helps prevent errors. The system actively helps prevent duplicate medications and PRN over-dispensing.
- **Safety & Compliance:** Automatic identification of controlled substances, psychotropics, and hazardous drugs ensures proper handling and compliance. The system can also prompt staff to capture necessary vitals before administration.
- **Real-Time Dashboards:** Monitor key performance metrics at the community or portfolio level, including overdue medications, refusals, late administrations, PRN follow-ups, incorrect controlled substance counts, and medication errors.
- **Pharmacy Integration:** (Standby Feature) Seamlessly connect with partner pharmacies for automated order updates, reducing manual data entry and improving care coordination.

c.) CRM and Move-In Management

Simple, Fast, and Connected Lead-to-Move-In Management

This module combines a powerful Customer Relationship Management (CRM) system with a streamlined move-in process. It provides a single, unified platform to manage leads, nurture relationships, and guide prospective residents and their families smoothly from the very first inquiry to their first day in the community.

Key features include:

- **Lead & Pipeline Management:** Track all leads, manage follow-ups, and gain real-time visibility into lead activity and team performance. Spot bottlenecks, support your sales team, and grow occupancy with confidence.

- **Move-In Management:** Track every step of the admissions process—from tour scheduling to document collection to final approval—in a single view. This eliminates chaos, keeps move-ins on schedule, and ensures families are informed throughout.
 - **Calendar & Email Integration:** Connect your existing calendar and email to synchronize tours, meetings, and all family communication. Everything is scheduled, sent, and tracked within the platform.
 - **Digital Signatures:** Collect and securely store legally binding signatures from anywhere. Forms auto-fill with lead information and flow directly into the move-in process, eliminating manual paperwork.
 - **Seamless EHR Integration:** Upon completion of the move-in process, all resident information flows automatically into the EHR, ensuring a smooth transition into care and eliminating duplicate data entry.
 - **Family Portal:** Engage families by allowing them to complete key tasks, e-sign documents, and upload necessary files from their own homes. This reduces staff workload and creates a more convenient and positive experience for families.
-

2. Hospitality & Property Management System

This system elevates the resident and family experience by managing the community like a world-class hotel, while also streamlining the physical operations of the property.

Core Features include:

- **Property Management System (PMS):** The central hub for all hospitality operations, managing resident profiles, apartment assignments, and front-desk activities.
- **Front Desk & Guest Management:** Streamline check-in/out for guests and new residents, manage inquiries, and handle payments for ancillary services (e.g., guest dining, salon services).
- **Housekeeping & Maintenance Management:** Empower staff with mobile tools to update room status (e.g., "make ready" to "occupied"), manage work orders for apartment maintenance, and schedule preventative maintenance tasks, ensuring a well-maintained and comfortable environment.
- **Resident & Family Engagement:** Manage preferences, event attendance, and dining reservations, enabling personalized services and fostering a vibrant community. Facilitate communication through automated announcements and community calendars.

- **Reporting & Analytics:** Gain insights into key performance indicators such as occupancy rates, unit turnover time, and resident satisfaction to drive continuous improvement.
-

3. Administrative & Billing System

This system ensures the financial health and operational efficiency of the community by automating critical back-office functions, from resident billing to supply chain management.

a.) Billing and Financial Management

Take Control of Your Invoices - Don't Undercharge for the Care You're Providing

This module automates the entire revenue cycle, ensuring accurate and timely billing while freeing staff from manual, error-prone tasks. By seamlessly integrating with the Care System, it guarantees that every service provided is captured and billed for.

Key features include:

- **Automated Charge Capture:** Charges for care services (e.g., level of care changes), rent, and ancillary items flow automatically from the EHR and Hospitality systems into the billing module in real-time, preventing missed revenue.
- **Flexible Resident Billing & Payments:** Generate clear, precise invoices that include both recurring charges (rent, care fees) and one-off items. Offer families a modern and flexible payment experience, including checks, bank transfers, credit cards, and auto-pay options.
- **Streamlined Reconciliation:** Payments are automatically reconciled with invoices, resident statements, and any disputes or chargebacks, saving the finance team countless hours of manual work.
- **Customizable Charge Library:** Build a library of reusable charge templates for different care levels, services, and amenities, ensuring consistency and accuracy across all resident accounts.
- **General Ledger Integration:** Seamlessly export detailed invoicing information into existing accounting software (e.g., QuickBooks, Sage Intacct) with a single click, capturing both recurring and one-off charges for complete financial visibility.

b.) Materials Management and Inventory System

Never Run Out. Never Waste. Always Compliant.

This system provides real-time visibility and control over all medical and non-medical supplies, from PPE and medications to cleaning products and food. It ensures that essential items are always available for resident care while optimizing costs and minimizing waste.

Key features include:

- **Inventory Control:** Track stock levels in real-time, set automated reorder points, and monitor expiration dates for all consumables.
- **Procurement & Vendor Management:** Automate purchase orders, manage vendor relationships, and track invoices to streamline the entire procurement cycle.
- **"First to Expire, First Out" (FEFO):** A critical feature for managing medications and perishable supplies, ensuring that items with the nearest expiration dates are used first to reduce waste.
- **Barcode/RFID Scanning:** Utilize barcode or RFID technology for accurate, real-time tracking of items from receipt to point of use, preventing stockouts and reducing manual data entry.
- **Asset Management:** Track durable medical equipment (e.g., wheelchairs, lifts, beds) and manage maintenance schedules to extend asset life and ensure safety and compliance.

Core Benefits:

- **Uninterrupted Resident Care:** Guarantees that crucial supplies are always available, eliminating service delays.
- **Cost Efficiency & Waste Reduction:** Optimizes inventory levels and reduces waste from expired items, directly impacting the bottom line.
- **Regulatory Compliance:** Simplifies audit trails and ensures the availability of necessary safety supplies and documentation.
- **Staff Efficiency:** Automates time-consuming manual tracking, allowing clinical and operational staff to focus on their primary responsibility: resident care.
