

# Simpler sidebars for the roles that live in SLMS all day.

Scoped to five priority roles — Nurse, Caregiver, Care Manager, Administrator, and Resident Coordinator. Each function was judged by what it actually does with data and workflow, not by its label. The result: a concrete proposed sidebar per role, with every record, approval, audit trail, and clinical rule left intact.

Care Manager 38

Nurse 37

Administrator 34

Caregiver 18

Resident Coordinator 9

● Draft for review — no changes made yet

---

## 01 Executive summary

The engine underneath is sound. Friction sits on the surface of the three heaviest roles, where one clinical job is split across many separately-named sidebar entries. Harmonizing those into a handful of hubs is a naming-and-grouping change, not a rebuild. Resident Coordinator is already right-sized and barely moves.

**136**

total sidebar entries across the five roles today (38 + 37 + 34 + 18 + 9).

**7**

overlap clusters where 2–6 entries do one job — alerts, care docs, meds, assessments, plans, staffing, endorsement.

**~72**

proposed entries after grouping — roughly a 45% shorter menu, same reach.

**0**

functions, records, or routes deleted. Every change is relocate, rename, or group.

■ Retain

■ Combine into a hub

■ Relocate into resident record

■ Hide from routine users

■ Remove from sidebar (route kept)

“Remove from sidebar” means the link leaves the menu; the route stays reachable — the same pattern already used in the August 2026 sidebar curation.

---

## 02 Harmonizing similar functions

Seven clusters covering the priority themes. Each becomes one hub with tabbed sub-views; frequent work queues stay one click away. The **Affects** line shows which of the five roles each touches.

### H-1 Alerts & escalations → one Action Queue

Four ways to say “something needs attention” sit side by side.

#### TODAY — 4 ENTRIES

- Clinical Alerts `alertcenter`
- Call Bells `callbells`
- Escalations `escalations`
- Incident Review `incidents`

#### PROPOSED — 1 HUB

- **Action Queue:** Alerts · Call Bells · Escalations · Incidents
- One badge = total items awaiting the role
- Caregiver’s Escalate / Call Bell / Report Incident collapse the same way

**Why:** all four are inbound work items triaged the same way. **Preserved:** incident records, SBAR threads, and alert rules unchanged — only the entry point merges.

**Affects:** Nurse · Care Manager · Caregiver · Superadmin

■ Combine 4 → 1

■ Records intact

## H-2

# Care documentation & monitoring → one charting surface

Six boards slice the same 14 assessment domains into separate items.

### TODAY — 6 ENTRIES

- Daily Care Logs `carelogs`
- ADL `adlmonitoring`
- Weight `weightmonitoring`
- Wound Care `woundcare`
- Vital Trends `vitalstrend`
- Domain Monitoring `domainmonitoring`

### PROPOSED

- **Chart Care** — the daily log stays the shift charting entry
- ADL · Weight · Wound · Vitals · Domain become **tabs inside the resident record**
- Sidebar drops 6 items → 1

**Why:** these are per-resident trend views of one framework — they belong in the resident's record, reached from the directory. **Preserved:** every board, its history, and the domain-monitoring discrepancy rules stay exactly as built.

**Affects:** Nurse · Care Manager · Caregiver (charting) · Superadmin

■ Combine

■ Into resident record

■ Rules intact

### H-3 Medication → one Medication hub

Administration, compliance, two stock lists, orders and approvals — up to six entries.

#### TODAY

- MAR `mar`
- Compliance `medcompliance`
- Med Inventory `medinventory`
- Mini Pharmacy `minipharmacy`
- Orders `orders`
- Approvals `approvalworkflows`

#### PROPOSED — MEDICATION HUB

- Tabs: **Administer (MAR)** · **Compliance** · **Orders** · **Approvals**
- **Inventory + Mini Pharmacy merge** into one Stock tab
- MAR — the daily queue — stays the default landing tab

**Why:** stages of one medication lifecycle; the two stock ledgers already cross-post charges. **Preserved:** MAR time-window rules, administration records, PIN-gated add-medication, and approval history untouched.

**Affects:** Nurse · Care Manager · Superadmin

■ Combine 6 → 1 hub

■ MAR queue stays top-level

## H-4 Assessments → one Assessment & Level of Care hub

The same LOC engine is reached under three names.

### TODAY — 3 LABELS

- Pre-Admission (v4.2) `prescreen`
- "Assessment & Level of Care"  
`rounds / casereview`
- Care Acuity & LOC `careacuity`

### PROPOSED

- **Assessment & LOC: Pre-Admission (v4.2) + Reassessment / LOC Review**
- Retire the duplicate "rounds / casereview" label

**Why:** three route names for one decision confuse which is authoritative. **Preserved — non-negotiable:** the approved **Assessment v4.2** — 14 scored domains (0–4 each → raw acuity /56, advisory) with the deterministic rule engine setting the Level of Care, plus validated Final-LOC authority — remains fully intact; this is labeling only.

**Affects:** Nurse · Care Manager · Superadmin

■ Merge labels

■ v4.2 engine intact

## H-5 Care plans & routine → one Care Plan group

Plan, generator, and 24-hour routine are three adjacent entries.

### TODAY

- Care Planning / Reviews `careplans`
- Care Plan Generator `careplangovernance`
- Routine Generator `routinegenerator`

### PROPOSED — CARE PLAN GROUP

- Tabs: **Plan & Review · Generate · 24-Hour Routine**
- PCG & Additional Services move under Services

**Why:** generating a plan and its 24-hour routine is one flow off the approved level. **Preserved — non-negotiable:** the Goals-of-Care framework, decision rules, and the 24-hour Routine Generator behave identically.

**Affects:** Nurse · Care Manager · Superadmin

■ Group 3 → 1

■ GoC + 24h routine intact

## H-6 Staffing → one Staffing group

Assignment, schedule, roster and profiles already feed each other.

### TODAY

- Task / Caregiver Assignment `taskassignment`
- Caregiver Schedule `caregiverschedule`
- Staff Roster `staffroster`
- Staff Profiles `staffprofiles`

### PROPOSED — STAFFING GROUP

- Tabs: **Assignments** · **Schedule** · **Roster** · **Profiles**
- Assignments (the shift work queue) stays default

**Why:** roster → schedule → assignment is one deployment pipeline. **Preserved:** the “only my residents during my shift” lock and roster import stay as built.

**Affects:** Nurse · Care Manager · Superadmin

■ Group 4 → 1

## H-7 Shift handover → one Shift Close flow

Three end-of-shift entries where one flow would do.

### TODAY

- Shift Handover `shiftendorsements`
- Shift Documentation `shiftsummary`
- Endorsement Status `endorsementdashboard`

### PROPOSED — SHIFT CLOSE

- Tabs: **Handover** · **What's Charted** · **Status**
- Extends the caregiver “Shift Close” pattern already shipped

**Why:** the caregiver portal already groups these three under one heading — this extends the same proven pattern to Nurse and Care Manager.

**Affects:** Nurse · Care Manager · Caregiver

■ Group 3 → 1

■ Carry-over & sign-off intact

## 03 One resident, one journey, one care record

The guiding principle of this proposal. Per-resident functions are scattered across the sidebar today; each becomes a tab *inside* the resident record — which already exists as the **Resident Card (rcard)** and **One Care · One Journey** timeline. The sidebar keeps two doors in; everything resident-specific lives behind them.

### SCATTERED PER-RESIDENT ENTRIES TODAY

- Resident Directory residents
- Clinical Records clinicalrecords
- Care Timeline carehistory
- One Care · One Journey residentjourney
- Vitals · ADL · Weight · Wound · Domain trends
- Vaccinations vaccinations
- Resident Documents documents
- Care Plan · Assessment · MAR (per resident)

### PROPOSED — SIDEBAR KEEPS TWO DOORS

- **Resident Directory** — the roster; a row opens the record
- **One Care · One Journey** — the full timeline
- Inside the record, tabs: **Profile · Journey · Clinical Records · Monitoring · Medications · Assessment & LOC · Care Plan · Documents · Vaccines**

**Why:** a nurse or caregiver should reach everything about one person from that person's record — not hunt across eight sidebar entries and re-pick the resident each time. The record hub and journey aggregator are already built; this routes the scattered views into them. **Preserved:** all boards, CRUD, signatures, and Drive links render inside the record instead of standalone.

■ Relocate ~8 entries into the record

■ All data & actions intact

## 04 Proposed sidebar — role by role

The concrete menu each role would see after the seven hubs and the resident record absorb their sub-entries. Groups are collapsible; **HUB** marks an entry that opens a tabbed screen. Frequent work queues are placed at the top of each list.

## PROPOSED SIDEBAR

### SHIFT COMMAND

- Shift Dashboard
- Clock In / Out
- Action Queue  
Alerts · Call Bells · Escalations · Incidents

HUB

### RESIDENTS & CARE

- Resident Directory  
opens the full resident record
- Move-in
- Chart Care (Daily Log)
- Today's Approved Care · Delivery

### CLINICAL HUBS

- Medication  
MAR · Compliance · Orders · Approvals · Stock
- Assessment & LOC  
Pre-Admission v4.2 · Reassessment
- Care Plan  
Plan · Generate · 24h Routine
- Staffing  
Assignments · Schedule · Roster

HUB

HUB

HUB

HUB

### COORDINATION & CLOSE

- Referrals · Physician Comms
- Services  
PCG · Additional Clinical Services
- Shift Close

HUB

- **Safeguarding · Infection Control**

#### KEY MOVES

- 4 triage entries → **Action Queue** hub (H-1)
- 6 monitoring boards → tabs in the **resident record** (H-2)
- 6 medication entries → **Medication** hub (H-3)
- 3 assessment labels → **Assessment & LOC** (H-4)
- Plan + Generator + Routine → **Care Plan** (H-5)
- Task/Schedule/Roster → **Staffing** (H-6)
- 3 endorsement entries → **Shift Close** (H-7)
- MAR, Action Queue & Chart Care stay top-level — the daily work queues

## PROPOSED SIDEBAR

### CLINICAL RISK OVERVIEW

- Clinical Governance (Dashboard)

- Action Queue

Alerts · Escalations · Incidents

HUB

- Resident Directory

opens the resident record

### ADMISSIONS & GOVERNANCE

- CRM & Leads

- Admissions

Pre-admission · Onboarding · Rooms

HUB

- Assessment & LOC

v4.2 · LOC Decision Review

HUB

- Care Plan

Generate · Plan · 24h Routine

HUB

### DELIVERY & SAFETY

- Care Delivery Reliability

- Medication

Compliance · Stock · Safety · Approvals

HUB

- Safety / Transitions

Safeguarding · Live Monitoring · Wound · Infection

HUB

### TEAM & DECISIONS

- Staffing

Assignments · Schedule · Roster · Profiles · Quality

HUB

- Open Decisions

PCG · Additional Services · Referrals · Physician Comms · Appointments

HUB

- Shift Close

HUB

- **Clinical Audit Trail**

#### KEY MOVES

- Alerts + Incidents + Escalations → **Action Queue**
- Wound / Vitals / Domain → tabs in the **resident record**
- Compliance + Inventory + Pharmacy + Safety → **Medication** hub
- 4 staffing entries → **Staffing** hub
- Endorsement trio → **Shift Close**
- Governance view keeps its aggregate KPI + drill-down; bedside boards reached via the record
- Clinical Audit Trail retained

## PROPOSED SIDEBAR — 34 FLAT ENTRIES INTO 4 GROUPS

### CLINICAL

- Dashboard · Action Queue
- Residents & Daily Care Logs
- Assessment & LOC · Care Plan · Routine
- Medication  
MAR · Meds · Approvals
- Tasks · Escalations · Vaccinations

HUB

### OPERATIONS

- CRM · Admissions · Consent Forms
- Staff Registry · Caregiver Schedule
- Rooms · Documents · Clinical Reports

### ADMINISTRATION

- Platform Governance
- SLMS Feature / Portal Matrix
- Staff Profiles · Audit Log · Inventory Alerts

### SYSTEM · collapsed by default

- Geofencing · Cameras · Camera Log
- Landing Studio · AI Assistant

ADMIN

ADMIN

### KEY MOVES

- 34 mostly-ungrouped links → **4 collapsible groups**
- Technical tools (Geofencing, Cameras, Landing Studio, AI Assistant) moved to a **System** group, collapsed
- Same hubs as the clinical roles (Medication, Assessment, Care Plan) reused here

- Nothing hidden is switched off — audit keeps recording, geofencing keeps enforcing
- Governance, Feature Matrix & Audit Log retained under Administration

# Caregiver

DAILY ASSISTANCE · ALREADY CURATED

~~18~~ → 15

## PROPOSED SIDEBAR — LIGHT TOUCH ON THE EXISTING JOB-BASED GROUPS

### MY SHIFT

- Shift Dashboard · Clock In/Out · My Roster

### MY RESIDENTS

- My Assigned Residents  
opens the resident record

- Assigned Care Plans · Care Timeline

### CARE THIS SHIFT

- Today's Care Checklist · Task Cards

### CHART CARE

- Daily Log · ADL · Weight · MAR

### NEED NURSE / HELP

- Action Queue  
Escalate · Call Bell · Report Incident

HUB

### SHIFT CLOSE

- What's Charted · Handover · Status

## KEY MOVES

- Already right-sized (6 job-based groups from the Aug-2026 curation) — kept
- 3 raise-help entries → single **Action Queue**, consistent with nurse
- Chart Care keeps ADL/Weight/MAR inline — caregivers chart these directly, so they stay
- Resident row opens the record; trends viewable there too

# Resident Coordinator

COORDINATION · NON-CLINICAL

9 → 9

## PROPOSED SIDEBAR — ALREADY LEAN, KEEP AS IS

### TODAY

- Resident Coordination (Dashboard)

### RESIDENTS

- Resident Snapshot  
opens the resident record (read-appropriate)

- Move-in

### SCHEDULE & COORDINATION

- Today & Schedule
- Admissions & Returns · Open Coordination

### ALERTS & FAMILY

- Alerts for Action
- Family Update Preferences
- Endorsement / Notes

### KEY MOVES

- Already the model of a right-sized sidebar — 9 focused entries, no overlap
- Only change: Resident Snapshot opens the shared **resident record** for consistency
- Non-clinical scope preserved — no clinical decision authority added

## 05 What is preserved — the guardrails

Every non-negotiable requirement, held explicitly. This audit touches navigation, labels, and grouping only.

### Assessment v4.2 engine

14 scored domains (0–4 → raw acuity /56, advisory); the deterministic rule engine sets the LOC. Unchanged.

### Decision rules & domain triggers

14-domain scoring and discrepancy → LOC-review ladder behave identically.

### Goals-of-Care framework

Care-plan generation off the approved level is untouched.

### 24-hour Routine Generator

Routine board and send-to-caregiver flow stay as built.

### Care360 integration

Role-based dashboard mapping and lead intake preserved.

### Records, approvals & audit trails

MAR, incidents, escalations, signatures, audit log — all retained.

### No deletions

No function or historical data removed. Routes kept even when a link leaves the menu.

### Work queues stay fast

Alerts, tasks, MAR, and daily charting remain top-level, one click in.

---

Prepared for LifeCare Living Solutions · SLMS function & navigation review · 3 September 2026 · Scoped to Nurse, Caregiver, Care Manager, Administrator & Resident Coordinator. Current counts reflect live sidebar entries; proposed counts are directional pending walkthrough.
