

LifeCare SLMS Care System — Planned Timeline to Go-Live

UAT, security & non-functional testing, and production go-live schedule

Prepared 8 September 2026 · Target dates (subject to UAT findings)

Dependencies & assumptions: Dates are targets and assume internal workflow verification completes the week of Sep 8. UAT sign-off, non-functional test results, and a signed HIPAA BAA with the hosting/database provider are prerequisites for go-live.

Note on VAPT: The formal third-party penetration test is shown as recommended/optional. If VAPT is required to *complete* before go-live, the go-live target moves to early November to allow for testing and remediation.
