Pre-Admission Resident Assessment Report

Resident: [REDACTED]

Age: [REDACTED]

Assessment Date: July 22, 2026

Assessment Conducted By: Myla Reyes / Jessa Llanzana

Recommended Level of Care: Level 2 – Moderate Care Support

LifeCare Acuity Score: 12/50

Purpose of Assessment

A comprehensive pre-admission assessment was conducted to evaluate [REDACTED] current health status, functional abilities, mobility, cognitive function, and overall care requirements. The objective is to recommend the most appropriate level of care that promotes her safety, independence, and quality of life within the LifeCare Living community.

Clinical Summary

[REDACTED] is a [REDACTED] with a recent history of a fall requiring hospitalization. Her medical history includes **neuralgia**, **hyponatremia**. She is currently taking prescribed medications, including **Memantine** and **Tegretol**, and continues to require routine monitoring to support her overall health and safety.

Although she ambulates and requires assistance with selected daily activities, she remains continent, communicates appropriately, and demonstrates only mild memory impairment without significant behavioral concerns.

Functional Assessment

Mobility

[REDACTED] is able to walk with the use of a walker and requires one-person assistance during transfers. Due to her recent fall and underlying neurological condition, supervision during mobility is recommended to reduce the risk of future falls.

Activities of Daily Living

■■■■■ remains independent in several activities of daily living, including dressing, grooming, and feeding. She benefits from assistance with bathing, toileting, and transfers to ensure safety and reduce the risk of injury.

Continence

She remains continent of both bladder and bowel and does not require the use of diapers or catheterization.

Cognitive Function

Assessment findings indicate **mild memory impairment**. She remains oriented to person, place, and time, communicates effectively, and did not demonstrate wandering, agitation, aggression, or other significant behavioral concerns during the assessment.

Nursing Requirements

At present, ■■■■■ does not require complex nursing interventions. Routine medication management and periodic health monitoring are considered appropriate for her current condition.

Clinical Risks

The primary clinical concern is **fall prevention**, considering her recent fall, and gait imbalance requiring one-man assistance in walking. There is no evidence of significant aspiration, pressure injury, or infection risk at the time of assessment.

Resident Strengths

■■■■■ demonstrates several strengths that support successful transition into assisted living:

- Independent in many personal care activities
- Continent of bladder and bowel
- Able to communicate appropriately
- Calm and cooperative demeanor
- Maintains good orientation
- Regular diet without swallowing difficulties
- No current need for complex nursing procedures

These strengths provide a solid foundation for maintaining her independence while receiving appropriate support.

Recommended Care Priorities

The following care priorities are recommended upon admission:

- Medication management and adherence
- Fall prevention and supervised mobility
- Neuralgia and hyponatremia support and monitoring
- Cognitive stimulation and memory support
- Infection prevention and health surveillance
- Social engagement and participation in meaningful activities

LifeCare Acuity Classification

Domain	Score
Activities of Daily Living	3 / 12
Mobility	3 / 6
Continence	0 / 4
Cognition	2 / 8
Nursing Complexity	0 / 8
Clinical Risks	4 / 12
Total Score	12 / 50

Recommended Level of Care:

Level 2 – Moderate Care Support

[REDACTED] assessment indicates that she remains relatively independent but requires assistance with selected activities of daily living, supervised mobility, and ongoing monitoring to maintain her safety and wellbeing. Her care needs do not currently require extensive nursing interventions or high-dependency care.

Recommendation

Based on the assessment findings, **LifeCare Living recommends admission under Level 2 – Moderate Care Support.**

This level of care provides an appropriate balance between promoting independence and ensuring safety through personalized assistance, routine nursing oversight, structured daily activities, and a supportive residential environment.

██████████ is expected to benefit from regular supervision, medication management, and opportunities for social engagement while preserving her dignity and independence.

A reassessment will be conducted periodically, or earlier if there is a significant change in her medical or functional condition, to ensure that her care plan continues to meet her evolving needs.
